51 associated vehicles were also recorded that showed no signs of living, but appear to reflect dual vehicle units were also counted during the street count.

Compared to most previous surveys, the proportion of "other" vehicles was much higher, and passenger vehicles much lower.  
Recent anecdotal observations support this, suggesting a rising trend in the use of such vehicles (e.g. unhitched trailers, vans) for this purpose.

Highlighted clusters represent areas with at least 5 recorded vehicles within 750 feet.
